

ABOUT NEXSAN

Nexsan® is leading the way in redefining unified storage. The company has been at the forefront in developing world-class storage technologies that are focused on the critical needs of our customers for over 18 years. Nexsan Unity™ is the first enterprise-class unified storage solution to incorporate secure enterprise file sync & share (EFSS), multi-site sync, and a secure archive in a single platform.

Nexsan E-Series and the relaunched BEAST are the storage workhorses of many of the most demanding data centers around the world due to their high performance, reliable, high density storage that offers exceptional value. Assureon delivers secure archive storage that ensures total compliance, protects against ransomware and hackers, and offers rock-solid litigation support.

Established in 1999, Nexsan has more than 20,000 customers worldwide, with over 40,000 systems deployed in over 100 countries through a comprehensive worldwide network of cloud service providers, value-added resellers and solutions integrators.

OUR LEADERSHIP TEAM

Ron Bienvenu - Executive Vice Chairman and CEO

Geoff Barrall - Chief Operating Officer

John Westfield - Chief Financial Officer

Victoria Grey - Chief Marketing Officer

Tony Craythorne - Senior Vice President of Sales

Mark Herbert - Senior Vice President of Engineering

Doug O'Shaughnessy - Vice President of Customer Service

Stewart Gallacher - Vice President of Global Operations

Nexsan is wholly owned by NXSX, a holding company owned by investors [Spear Point Capital Management LLC](#) and [Glassbridge Enterprises, Inc.](#) (NYSE: GLA). Spear Point Capital Management LLC ("Spear Point") is a deep value investor specializing in creating superior value in their portfolio companies. GlassBridge – formerly known as Imation Corp. is a holding company exploring a diverse range of new, strategic asset management business opportunities for its portfolio.

BOARD OF DIRECTORS

Trevor Calhoun - Executive Chairman of the Board

Ron Bienvenu - Executive Vice Chairman of the Board and CEO

Joseph A. De Perio - Board Member

Geoff Barrall - Board Member

Robert Fernander - Board Member and Chairman Emeritus

Our History

- Founded in 1999
- Pioneered capacity-optimized storage
- A history of technological innovation
- Over 40,000 systems deployed
- Over 20,000 end users
- Worldwide implementations in 100 countries
- Six major facilities: Campbell, CA Headquarters, Thousand Oaks, CA, Escondido, CA, Montreal, Canada, Derby, UK and East Isley, UK.

We think of our products as “purpose-built” rather than general purpose. That means product design starts by understanding the diverse workloads in our customers’ environments. And because these workloads vary, we offer a broad line where each product has clear intent and exceptional value. The ultimate expression of our commitment to purpose-built storage is our new Hyper-Unified Storage — adding capabilities to our award-winning unified storage that transform storage from a routine requirement into a business advantage: Simple sync and share for users, real-time file sync across locations, and data archiving with unmatched security and standards compliance.

If you, as an IT professional, require cost-effective block storage for backup, databases or Exchange, scalable and highly-flexible NAS file systems, a global private-cloud sync and share infrastructure, or secure archiving, we invite you to consider Nexsan. Purpose-built storage with innovation that matters, reliability to let you sleep well, and pricing to fit your always-constrained budget.

NEXSAN STORAGE

UNITY - UNIFIED STORAGE SYSTEMS

Our flagship product, **Unity**, sets the new standard for Hyper-Unified Storage. It starts as scalable, flexible unified storage. It lets you mix-and-match high-performance flash with inexpensive hard disks. And it lets you mix block storage with file storage for a hybrid approach. Then, it stands out by including a full private-cloud infrastructure at no additional cost. Unity includes a plug-and-play ability to sync files in real-time across any number of disparate locations with secure communication across standard internet connections. Unity also replaces the growing and dangerous user adoption of cloud-sharing products like Dropbox and Box by delivering similar functionality completely under the control of IT. Unity can even satisfy the most demanding secure archive requirements by integrating all the capabilities of our industry-leading Unity Active Archive in a single system.

HIGH-DENSITY STORAGE SYSTEMS

The workhorse of our product line is the battle-tested **E-Series** and **BEAST**. Designed to process heavy workloads with demanding applications, it's high performance, capacity, density, reliability, and ease of management make it fit environments where others fail. E-Series and BEAST were designed to run in the most challenging of environments — from departments without perfectly optimal data centers to branch offices to cruise ships. The E-Series and BEAST and its block storage predecessors were our first products, so when you hear our customers say things like, “You just set it and forget it” or “Nexsan systems almost last too long,” you are hearing the result of our passion for ease of use and reliability.

SECURE ARCHIVE STORAGE SYSTEMS

For long term and active archive storage, we have **Unity Active Archive** and **Assureon**. It's the safest, most secure and cost-effective way to protect data. With automatic, policy-based data transfer from your NAS devices, Unity Active Archive and Assureon ensures total compliance, protects against ransomware and hackers, and offers rock-solid litigation support. Strict policies can be set at strict levels so not even sys admins can change data. And along the way, it can cut the total cost of storage dramatically by offloading rarely used files from your most expensive primary storage in a way that's completely transparent to users.
